

Simio is a unique multi-paradigm modeling tool that combines the simplicity of objects with the flexibility of processes to provide a rapid modeling capability without requiring programming.

Simio can be used to predict and improve the performance of dynamic, complex systems in passenger processing, airside operations, ground transportation, baggage handling, logistics, lean-six-sigma and other disciplines.

See the future

What if you were able to test your plans and identify their weaknesses early in their development phase. Wouldn't you improve them?

What if you had an efficient way to define and visualize your whole system: facilities, equipment, people, flights and processes? Wouldn't you check your ideas to make sure that it all made sense? That the resource mix is optimal and that money is invested wisely?

Simio is a friend of change. Through the production of animation, charts and statistics, it enables you to define your ideas, quantify their performance, refine them further still then sell them. Simply, safely, without risk.

Answer Tough Questions

Inside and outside airport terminals, we can help you answer questions such as:

- How can I best focus my investments to increase runway capacity?
- How can we deploy our people to minimize cost while maintaining our service levels?

- How do we make the most out of our limited queuing space?
- Will the central conveyor system be able to handle the bags destined to the new gates?
- What will be the impact of the taxiway on aircraft turnaround times?
- How should we allocate our curb space?
- What will be the wait time at security on Monday mornings?
- How could we expand our parking lot?
- How will ePILs effect our operations?
- and more...

Build Accurate 3D Models Quickly Without Compromise

Simio's straightforward drag-and-drop interface allows users to create models quickly and easily -- giving new users a glimpse into the future of their designs. Simio is simulation software with superior flexibility and the ability to quickly model your system without compromise. Simio is rapid modeling without programming so profits accrue sooner. Simio is simulation software at the speed of business.

The Simio Advantage

- Lower total cost of ownership delivers faster results with less investment in time and money.
- Integrated 3D technology provides an immersive visual experience.
- Advanced interface and extensible objects make it easy to learn and accelerate the modeling process.
- Simio provides you with reliable answers faster.
